GETTING STARTED - APP LOGIN / CHANGE PASSWORD

After you have been invited to ReadyChek, you will receive a password to use with the email address to log in to the app. You will also see links to download the app for your device. Once you have the app loaded (make sure you have the correct app - ReadyChek), you can log in with your email and temporary password.
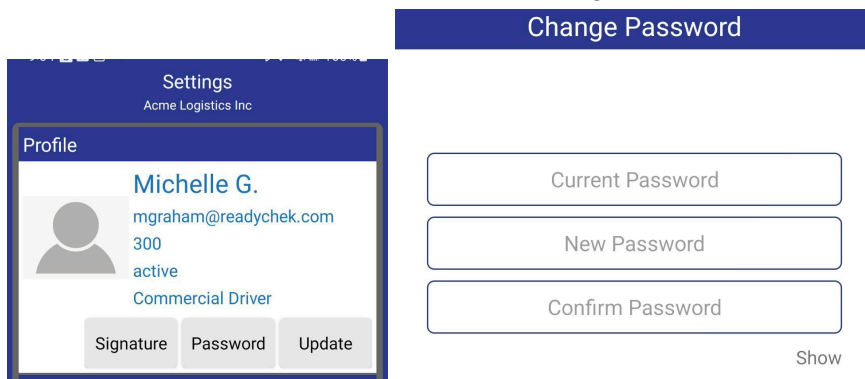

Change password

It is important to immediately change your password to something you can remember, and that is one only you will know.

The password can be changed on the <u>app</u> using the "Settings" or "Manage" cog icon. Look at the Profile section, and update to change password

Logging In with your new password

Once you have changed your password to something you will remember, the app will remember your login information to help you get into the ReadyChek app faster.
